Spec objected to, fig. 4, numerals 43, 44 not seen.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the claims 3, 13 "storage" and claims 10, 11, "synchronization" features or circuits must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

In addition to Replacement Sheets containing the corrected drawing figure(s), applicant is required to submit a marked-up copy of each Replacement Sheet including annotations indicating the changes made to the previous version. The marked-up copy

must be clearly labeled as "Annotated Marked-up Drawings" and must be presented in the amendment or remarks section that explains the change(s) to the drawings. See 37 CFR 1.121(d). Failure to timely submit the proposed drawing and marked-up copy will result in the abandonment of the application.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dayley alone or taken in view of Goosen, Leung, Copeland Park, Ma, Slade and Orr.

Dayley fig. 5 discloses a system with electronic apparatus 14 or 10c and with expansion units 10d, with first and second connectors 16, 20 joined by signal wires 57, 59.

Such signal line use also suggested by Park at 240, Ma at 16a, 19 and Copeland, figs. 18-28. Dayley figs. 5, 7 shows use of fourth connectors for cables 6, 58, 158 from auxiliaries. These are not shown in detail but such usage further suggested by Ma, fig. 1, Leung at 58 Goosen at 12 and Orr at 20, fig. 5. Claim 3, "storage" suggested by Slade, col. 2, line 36. Claim 4 "display device" shown by Delay at 156. Claims 5, 6, 7, also met by Daylay system. Claim 8, "data, function" define no structure over Daylay. Claim 9 met by Daylay. For claims 10, 11 "data synchronization suggested by Goosen, col. 5, lines 48-60. Other claims met by Daylay, etc applied as above. While features such as storage, signal lines, data, function, data synchronization are discussed above, these are all deemed obvious features even without specific teachings since only disclosed broadly in application *and are seen to be well known expedients*.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over any one or Orr, Ma or Goossen.

Art Unit: 2839

The patents are applied with top module read as apparatus and others read as expansion units. Goosen, see fig. 2. Use of signal lines, storage "data, function" all relate to known expedients.
